These concepts are not made precise so that a wide range of objects can be thought of as being under the same umbrella. Sun, 17 Mar 2019 10:20:00 GMT Combinatorial design - Wikipedia - An experiment is a procedure carried out to support, refute, or validate a hypothesis. Experiments provide insight into cause-and-effect by demonstrating what outcome occurs when a particular factor is manipulated. Experiments vary greatly in goal and scale, but always rely on repeatable procedure and logical analysis of the results.
