Thu, 18 Apr 2019 12:05:00 GMT practical marine electrical knowledge 2nd pdf - A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force across a second coil wound around the same core. Electrical energy can be transferred between the two coils, without a metallic connection between the ...
